## 10182627

### INTERNATIONAL 4400 ADVANCED LIFE SUPPORT

1. Replace all batteries. ALS Repair. Broken hold down.
2. Latch on one side of battery cover/step broken, others very loose. Removed broken latch-Note: Parts dept. only has black latches and broken one was chrome. Disassemble both latches and used good pieces from new latch to fix old latch and reinstall. Adjust all latches.
3. Replace wiper blades.
4. Battery slide tray is hard to open. Binding up. Wash and clean out debris from tracks. Relube and work tray back and forth until loose and free.
5. Service power steering
6. Fluid return hose from gear box to reservoir. Started leaking. Replace hose assembly.
7. Replace all patient area intake filters and cab rear a/c filter-Note: Many of the cage retaining screws stripped out. Replace all
8. Front tires has slight drift to the right. Set up front axle on stands and rotated front tires.
9. Repair eyelet on oxygen wrench cable and remounted on wall.
10. Removed front hubs from axle knock out seals and bearings. Washed out all grease from bearings and hubs. Reinstalled bearings and new seals. Reinstalled hubs on axle and installed new outer hub cap for oil fill. Filled hubs with gear oil.
11. 5 of the undertruck light brackets are very loose. Remove crews locked tight and reinstalled. Note: some screws are stripped out. Redrilled brakes and installed oversized screws.
12. Serviced air dryer.
13. Primary air tank keeps losing air. Spray tested all fittings associated with primary air tank, found two bushings on fittings bad. Replaced fittings and also found 3 small leaks in secondary air system that was pulling air out of primary tank. Repaired leaks.
14. A/C compressor wiring was rotten and casing was cracked. Exposing inner wires. Evacuated system. Disconnect 110V wiring from electrical box. Removed compressor assembly from vehicle, on bench, disassembled wiring from top of the compressor (all soldered). On connectors, find new 12 gauge X 4 wire cable to make up new 90 degree connector and resolder to terminal on top of compressor. Reinstalled protection cover. Reinstalled compressor. Reconnected 110V wiring to electrical box. Vacuumed system. Recharged system. Test run and now all is ok.
15. Unbolt compressor from its mounting and move to the side. The 6 mounting bolts holding the platform for compressor were way too long and rubbing into the wiring and housing. Replaced all bolts with shorter ones. Rebolted compressor to platform.
16. Replaced all engine drive belts. Found one tensioner for rear a/c compressor bad. Replaced tensioner.
17. Engine oil leaks severe. Oil dripping from front of

**INTERNATIONAL 4400 ADVANCED LIFE SUPPORT**

engine to off back of transmission. All on left side. First I completely washed off all oil to determine the location of oil leaks. The front leak was coming from bottom of high pressure pump for injection system. Midway back found 2 more leaks coming from oil pressure line from block to feed air compressor and also a pressure switch just in front of starter. Replaced high pressure pump , oiled feed line to air compressor and oiled pressure switch. Started engine and ran until running temperature. Shut down and rechecked. No leaks found.

18. Vehicle came in with coolant recovery bottle 3/4 empty. Check with Tommy to see if he was adding coolant. He said he wasn't but at the station was almost every shift. Removed EGR exhaust crossover pipe to check and coolant ran out. Pipe and EGR valve was soaked. Also checked intake throttle valve and it was caked heavily with wet mucky debris. Drained out all coolant and removed all components of the EGR system. Washed out debris from components that will be reused. Replaced both right and left side coolers. Replace all attaching hoses and clamps. Installed new EGR and intake throttle valves. Replaced broken radiator. Drained valve an refilled system. Road Test. Rechecked and all is ok now.
