

SIGNAL COMMUNICATION

****Proper signaling will make sure that other drivers, pedestrians and anyone around your vehicle know you're there and what you're planning to do next.***

1. Always signal when you change direction. Signal even when you don't see any vehicles around. There may be vehicles you don't see.
2. Watch for other motorists' signals.
3. Always signal before pulling next to (or away from) the curb.
4. Always signal before turning or changing lanes.
5. Even when you signal, do not assume that the space is clear. Remember to check mirrors.
