TO:	ALL BUILDING DIVISION PERSONN	VEL
FROM:	DOUG WISE BUILDING DIVISION DIRECTOR	
PREPARED BY:	<b>BUILDING DIVISION</b>	
SUBJECT:	EXPEDITED SOLAR PHOTOVOLTA DETACHED SINGLE-FAMILY DWEI	
PPM #:	PB-O-135	
ISSUE DATE November 8, 2019		EFFECTIVE DATE April 1, 2020

## **PURPOSE**:

To provide procedural guidelines for licensed Solar Contractors (CVC) and Electrical Contractors (EC) to request expedited permitting of FPL *Tier 1* (max 10 kW) Solar Photovoltaic (PV) systems on existing site-built detached Single-Family Dwellings.

## **<u>UPDATES</u>**:

Future updates to this PPM are the responsibility of the Director of the Building Division, Deputy Building Official, Assistant Deputy Building Official, or Codes Product & Training Supervisor, under the authority of the Director of the Building Division.

# AUTHORITY:

- Chapter 7 Florida Building Code-Existing Building (FEBC), as may be amended
- Chapters 15, 16, 31 Florida Building Code-Building (FBC), as may be amended
- Chapters 3, 9 Florida Building Code-Residential (FRC), as may be amended
- Chapters 4, 5 Florida Building Code-Energy Conservation (FECC), as may be amended
- PV System Requirements National Electrical Code (NEC), NFPA 70, as may be amended
- Chapter 1 Palm Beach County Amendments (PBCA) to the FBC, as may be amended
- Rule 6C7-8 Florida Rules governing Photovoltaic System Standards and Certification, Florida Administrative Code (FAC), as may be amended.
- Rule 25-6 Florida Rules governing Interconnection of site generated Photovoltaic energy with Utility power grid, Florida Administrative Code (FAC), as may be amended.
- Net Metering Guidelines Florida Power & Light (FPL) regulations for *Tier 1* (up to 10 kW) Grid Interconnected Solar PV systems, as may be amended.

# **POLICY:**

This policy addresses the permitting of small Solar Photovoltaic systems (FPL *Tier 1* - up to 10 kW) on existing site-built detached single-family dwellings. The *Expedited* program will initially offer three (3) day processing times, with the goal of eventually reaching 'next day' and 'walk-thru' time frames. The Design and Installation of all PV Systems shall comply with the provisions referenced above in effect at the time of permit application (i.e. FBC, NEC, FAC, PBCA-FBC, FPL, etc.).

## **PROCEDURE**:

The following procedures shall be followed for the Submittal, Review, Issuance, and Inspection of Expedited Solar Photovoltaic (PV) Systems proposed for detached Single-Family Dwellings:

#### Permitting

The following documents shall be provided by a <u>licensed CVC or EC Contractor</u>. A CVC is required to subcontract an EC (via No-Fee sub permit) to make the final PV system connection to the house wiring for *Utility Grid-Interactive* systems.

- a. <u>Two (2) completed copies</u>:
  - i. FORM Expedited Solar PV Checklist (Attachment A) initialed by the Qualifier
  - ii. FORM-Expedited Solar PV Worksheet (Attachment B);
- b. Two (2) copies (Site-Specific):
  - i. <u>Roof Layout Plan</u> show location of panels/arrays (Installation Only in Zones 1 & 2).
  - ii. <u>Structural Attachment Detail(s)</u> clearly identify all components including racking, brackets, fasteners, etc. that are integral to wind-load resistance and transfer path;
  - iii. <u>Electrical Plan</u> clearly show all Wiring, J-Boxes, Combiner Boxes, Inverters, Panels, and Utility Interconnection Point locations; and verify all are listed for location and use.
  - iv. <u>Label Requirements</u> Specify all Marking and Labeling methods and locations per the National Electrical Code (NEC).

#### Revisions

<u>Office Revisions</u> – Required for significant design modifications such as change of attachment methods or change of interconnection type (line/supply side tap vs load side interconnection)
<u>Field Revisions</u> – *May* be accepted by the Inspector for minor modifications in the field

### Inspections

1. Provide "Installation Certification Form" (Attachment C) and Photos (Item #3) to Inspector at Final Inspection.

- 2. Schedule "Final Electric" and "Final Solar PV" Inspections at same time (Line/Supply-Side connections require additional "Service Change" Inspection. Schedule by calling 561-233-5170).
- 3. Provide Photographic evidence of each phase of the installation (must be Site-specific):
  - a. Rack/Bracket mounting attachment to Structural members including Flashing & Sealing
  - b. Module attachment to Rack/Rail/Brackets, as applicable
  - c. Bonding attachments for PV Panels/Modules and Mounting system
  - d. Wiring installation and connections
  - e. Wiring method used through Attic, if applicable
  - f. Connections within each of the following: Combiner(s), Inverter(s), Transfer Switch(s), Panel(s), and the final Utility Interconnection point.

# EXPEDITED SOLAR PV PERMIT APPLICATION CHECKLIST

INTENDED FOR LICENSED CVC and EC CONTRACTORS ONLY

Qualifier must certify <u>ALL</u> the following statements by <u>Initialing each</u> one (otherwise, submit application via normal process):

# STRUCTURAL Details

- This is a detached **Single Family Dwelling** (SFD), or, is a free-standing Residential Accessory Structure This structure is legally permitted, and is compliant with setbacks and height requirements
- *Expedited Solar PV Permit* Worksheet (Attachment B) is completed and attached
- The existing roof assembly and covering are in satisfactory condition for the proposed installation
- \_\_\_\_\_The Homeowner has been advised of the impact a rooftop installation might have on existing warranties
- \_\_\_\_\_The roof is framed with wood trusses or rafters at no greater than 24" on center
- \_\_\_\_\_The Design Wind Speed for the project is 170vult MPH; Exposure B or C
- \_\_\_\_\_The Mounting System is <u>Site-Specifically Engineered</u> to 170vult MPH wind-load pressures
- \_\_\_\_\_The Array supports are spaced so that no *Point Load* attachment exceeds 50 lbs. (see Worksheet).
- \_\_\_\_\_The Array supports are spaced so the *Distributed Load* does not exceed 5 psf. (see Worksheet)
- \_\_\_\_\_The Array is set back from all roof edges by at least 3' (feet)
- \_\_\_\_\_The Array does not cantilever over the perimeter anchors by more than 6" (inches)
- \_\_\_\_\_The gap under the modules to the roof surface does not exceed 12" (inches)
- \_\_\_\_\_Anchor-to-roof Flashing/Sealing method and product(s) are identified and listed for this use

# **ELECTRICAL Details**

- The Solar PV maximum load to be added to the panel-board/service is based on the rating of the system and is limited to 10 kW (see worksheet for wire, inverter, disconnect, etc. sizing limitations)
- \_\_\_\_\_The System is FSEC Certified or is designed by an appropriate licensed professional
- \_\_\_\_\_The PV System is composed of 4 series strings, or less, per Inverter
- \_\_\_\_\_All modules, inverters, combiner boxes, etc. are identified, listed and labeled for use in PV systems

# **ADDITIONAL DOCUMENTS REOUIRED**

- 1. Building Permit Application
- 2. Expedited Solar PV Worksheet (Attachment B)
- 3. Supporting certification and/or listing documents for all equipment and components
- 4. CVC required to subcontract with an EC (No-Fee sub permit) for final utility-interactive connection
- 5. Qualifier's Certification of Installation form (Attachment C) Submit to Inspector at Final Inspection
- 6. Photographic evidence of each phase of the installation (must be verifiable as site-specific)
  - a. Rack/Bracket mount attachments to Structural members
  - b. PV Module attachment to mounting Rack/Rail/Brackets
  - c. Array and Rack bonding attachments
  - d. Connections within Combiner, Inverter, Transfer Switch, Panel, and Utility Interconnection point

# BEACH COUNTY

# EXPEDITED SOLAR PV PERMIT

**WORKSHEET** 

Address:

Racking/Mounting/Bracket Manufacturers (include specs): \_\_\_\_\_

Max Spacing between Brackets or Attachment Points on Rail:

**Engineered Attachment Detail is Included** showing ALL Components & Attachments within the wind load path (*Initial*) [i.e. PV Panel  $\rightarrow$  Bracket(s)  $\rightarrow$  Fastener(s)  $\rightarrow$  Rail and/or Mounting Feet  $\rightarrow$  Fastener(s)  $\rightarrow$  Structure]

# SOLAR ARRAY - Weight and Loading Calculations

Point Load Calculation:

**Distributed Load Calculation:** 

1.	Number of Panels in Array	5. Solar Panel area (I x w) ft <sup>2</sup>
2.	Total Weight of PV Modules and Rails	6. Total Array Area (#1 x #5)
3.	Total Number of Attachment Points	7. *DISTRIBUTED LOAD*
4.	Weight per Attachment Point (#2 ÷ #3)	$(Must be \le 5lb/ft^2) \qquad (#2 \div #6)$
	* <b>POINT LOAD</b> * - Must be $\leq$ 50 lbs.	
	UTILITY-INTERACT	IVE Grid Connection Details:
то	TAL PV Output Ampacity:     • SUPPLY/LINE Side Connection:	Output Circuit Conductor Size:
	Service Rating:	Splice/Tap Device:
		Manufacturer:
	LOAD Side Connection:	

Identify (circle) the system design: Wire/ OCPD/ Busbar/ Main Breaker [Table per NEC 705.12(D)]

Inverter Output Maximum Current	Inverter OCPD Required	Inverter Output Conductor Size	Minimum Busbar Ampacity and Main Breaker Size Combinations for LOAD Side Connection
64 Amps	80 Amps	4 AWG	400/400 or 200/150
56 Amps	70 Amps	4 AWG	225/ 200 or 250/ 225
48 Amps	60 Amps	6 AWG	300/ 300 or 200/ 175
40 Amps	50 Amps	8 AWG	125/ 100 or 150/ 125
32 Amps	40 Amps	8 AWG	225/225 or 200/200 or 150/125
24 Amps	30 Amps	10 AWG	150/ 150
16 Amps	20 Amps	12 AWG	100/100 or 70/60
12 Amps	15 Amps	14 AWG	80/ 80

I certify that all the foregoing information is accurate and all work performed will comply with all applicable codes & standards regulating construction.
