FAA RFP PROCESS

OBJECTIVE OF PUBLIC FORUM AND COMMUNITY SURVEY

- The main objective of the public forum and community survey is to provide space for the community's voice to be heard in terms of highlighting the existing service needs, gaps and funding priorities.
- This data will serve as one of several resources used to inform the RFP process.
- This effort better ensures the funding priorities are relevant and will work to meet service needs in the community.

A REPORT OF HEALTH & HUMAN SERVICES IN PALM BEACH COUNTY- Based on Key Community Indicators 2010

Indicator Summary

Summary Page Synopsis

The Indicator Summary page is intended to provide the reader with a "quick" reference concerning the status of 16 Service Category topics based on an Overall Goal & Key Indicator contained within this document. Please use the Legend and Notes Section listed below for further analysis.

Click on the indicator signal to navigate to the desired page. Clicking on the footer on any page will return you to the Table of Contents.

Legend & Notes

Green is good. The Goal is being met and the Trend is upward.

Yellow is caution. It is used either if the Goal is being met but the Trend is downward or if the Goal is not being met but the Trend is upward.

Red is alarming. Red is used if the Goal is not being met and the Trend is downward.

Trend is defined as six (6) to eight (8) data points.

	(+) Trend	(-) Trend
> Goal	Green	Yellow
< Goal	Yellow	Red

KEY INDICATOR

The Key Indicator for Mental Health is suicide rate

GOAL

Reduce the suicide rate from its current rate of 4.8 persons per 100,000 population

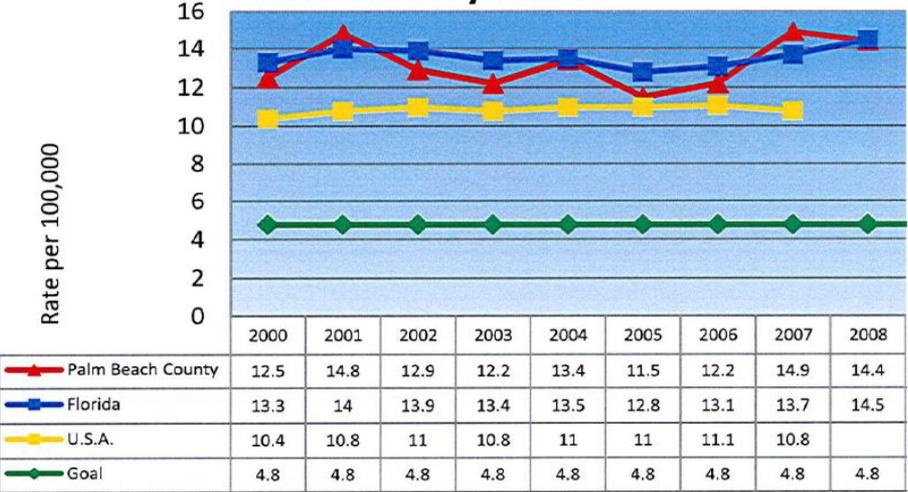

“Suicide is a lead indicator of the prevalence of mental health problems.”
 — Source: <http://www.doh.state.fl.us/family/childhealth/childreport/hi/hi9/cuicide.html>

Current Status

There are approximately three (3) suicidal deaths per week among residents in Palm Beach County. In 2009 there were 189 deaths, which is 15.75 deaths per 100,000 residents. The previous year there were 188. This is higher than the state average of 14.5 individuals per 100,000.

Table #16

Total Deaths by Suicide

Of importance to consider when discussing mental health services is the distinction between mental illness and mental health. An individual may have mental health issues without being mentally ill. The inability to live life to the fullest because of stress resulting from illness, economic concerns, caring for ageing parents or ill children and relationship conflicts does not make a person mentally ill. Mental health and mental illness are often used interchangeably but really refer to two different states of wellness. Mental health is a state of successful performance of mental function, resulting in productive activities, fulfilling relationships with other people and the ability to adapt to change and to cope with adversity. Mental illness refers collectively to all diagnosable mental disorders. (Surgeon General)

In Palm Beach County, as is true nationally, more than one (1) in four (4) people (26%) have some form of mental illness, cutting across socio-economic boundaries. As Table #16 indicates, one (1) in four (4) adults in Palm Beach County suffers from a diagnosable mental disorder in a given year (more than 261,000 people). Nearly half of those suffer from two (2) or more disorders simultaneously.

Current Status (Continued)

While serious mental illness strikes a smaller percent of people (6%), we still have close to 60,000 people in Palm Beach County with disorder such as schizophrenia, bipolar disorder, and major depressive disorder.

Current public funding (state and county) supports services for youth and adults with diagnosable mental health/illness issues. Persons accessing these services usually are required to pass a means test, and services are provided on a sliding scale. When a person has a diagnosable mental illness and lacks the ability to pay services, may be provided. Public funding is also used to provide mental health services for those in the correctional system.

On the other hand, quality of life issues are either covered by private insurance or self-pay. Public dollars allocated to these services are limited and while mental health services are supposed to be provided by private insurers in an equitable reimbursement with medical services, it will not be until 2014 that insurers will be prohibited from providing such coverage for previously existing conditions.

Mental health services are geographically dispersed throughout the county (central/north, central/south and western communities). Oakwood Center of the Palm Beaches and South County Mental Health Center have been the only two public Baker Act facilities in the county; however, St. Mary's Hospital and Columbia hospital have been added to the system.

Palm Beach County has the second largest number of returning veterans in the state. Through community and agency collaboration, services are being identified to support the needs of the veterans and their families, to address post traumatic stress disorder (PTSD) and other stress issues experienced.

Given the current economic situation, all service providers are experiencing an increase in requests for services to address multiple issues. A new program has been developed for residents who are experiencing economic crisis.

As with all services, there are more demands for service than the system can provide, especially to deal with mental health issues. Community awareness and support for the prevention of mental health issues and co-occurring disorders is a continuing focus for all components of the system of care.

The statistics for suicide indicate that:

- In 2008, Palm Beach County had a suicide rate of 14.4 individuals per 100,000 population.
- In 2008, the State of Florida had a suicide rate of 14.5 individuals per 100,000 population.
- Total yearly deaths from suicide in Palm Beach County increased from 12.5 in 2000 to 14.4 in 2008 (per 100,000 population). An increase of one tenth of a percent (.1) (per 100,000 populations).
- Total yearly deaths from suicide in the State of Florida increased from 13.3 in 2000 to 14.5 in 2008 (per 100,000 population). An increase of 1.2 (per 100,000 population).
- Total yearly deaths from suicide in the nation increased from 10.4 in 2000 to 10.5 in 2007 (per 100,000 population). An increase of one tenth of a percent (.1) (per 100,000 population).
- Palm Beach County has the second largest population of returning veterans in the State of Florida, and returning veterans have a suicide rate higher than the population at large.
- Based on 2008 suicide data, Palm Beach County is below the State of Florida suicide rate by one tenth of a percent (.1) (per 100,000 population)

Current and Future Planning Efforts

The public funders are collaborating to expand the expertise of the provider agencies to address the complex issues in the service delivery system. Providers are being trained in co-occurring disorders, trauma informed care, client-directed outcome informed practice and evidence based practice. In addition, the system of care is expanding services to address the unique needs of the homeless population and the returning veterans from Iraq and Afghanistan. The service providers, education and law enforcement are collaborating to develop a matrix of services that include prevention and intervention services for youth to reduce the impact of mental health issues on the adult population.

While not included in this category the needs of the aging population and those who serve as caretakers are an increasingly growing underserved population.

- The Circuit 15 Substance Abuse and Mental Health Program (SABMH) office supports planning and funding efforts for community providers and partners to address the needs of both youth and adults.
- The Circuit 15 SAMH office collaborates with the Department of Juvenile Justice and the Palm beach Sheriff's Office to provide services to both youth and adults involved with either system.
- The Criminal Justice Commission is spearheading an interagency planning group to develop strategies to increase the outcomes for youth and adults touched by the criminal justice system.
- Community providers conduct community awareness meetings and distribute information on signs, symptoms and resources to address mental health issues.
- Palm Beach County provides support to 211 to provide information and referral for all country residents.
- Strengthen the capacity of the community to plan strategically for the current and future needs of an integrated health and behavioral health system.
- Build toward a system that provides access to needed services as close to where they are needed as possible.

- De-stigmatize services for mental and behavioral health by integrating them into normalized settings such as primary care healthcare settings.
- Take advantage of increasingly evidence-based interventions such as peer mentoring and other supports that increase resilience and adherence to treatment interventions.
- Increase the number of people who are diverted from the criminal justice system into appropriate mental health treatment and support systems.

Current and Future Planning Efforts (continued)

Mental health is an integral part of the total health and well-being of Palm Beach County residents. The suicide rate is not an indicator of the effectiveness of mental health treatment, because thankfully, suicide occurs too infrequently in the population to be a meaningful measure of system success. All providers already have a goal of zero suicides in the populations they treat. Most people with mental illness are not suicidal.

Other more meaningful indicators of the effectiveness of mental health would include improved health and well-being as reported by people in treatment, reduced use of hospitals by people in treatment, and improved overall health status of people in the community. Our community should begin to collect data to measure these and other indicators of well-being.

The suicide rate is highlighted here because it can be tracked over time and can demonstrate whether people are receiving the kinds of care that will prevent the worst mental health crisis: an untimely death. Suicide can be averted with the right kinds of mental health services and care.

Suicide is most frequently a direct result of major depression, which is a treatable disease of the brain. Depression is just one of the many serious mental health disorders caused by organic brain diseases including schizophrenia, bipolar disorder, anxiety and many more. These diseases are sometimes genetic and sometimes situational. Some are chronic and need treatment and medication while other mental health disorders are situational and are related to something that has occurred in the environment. Some examples of situational mental health disorders are depression or anxiety related to the grief of losing a loved one, a divorce, a job or other catastrophic occurrence. Situational mental health problems can be very serious but with the proper care, they can be controlled.

Without the proper care, many with mental health disorders can end up in the hospital, in jail or worse. In order to avoid the high cost to our community for these institutions, our public funding goes to treatment and preventative services. With the appropriate supports in place, people with mental illness can lead productive and rewarding lives.

Table #17

	Percent	Number of people 18 and older
Mental Disorder	26.20%	261,000
2 or more disorders	45% of above	117,454
Serious Mental Illness	6%	59,773
Mood Disorder	9.50%	94,640
Bipolar	2.60%	25,902
Schizophrenia	1.10%	10,958

Source: NIMH and U.S. Census

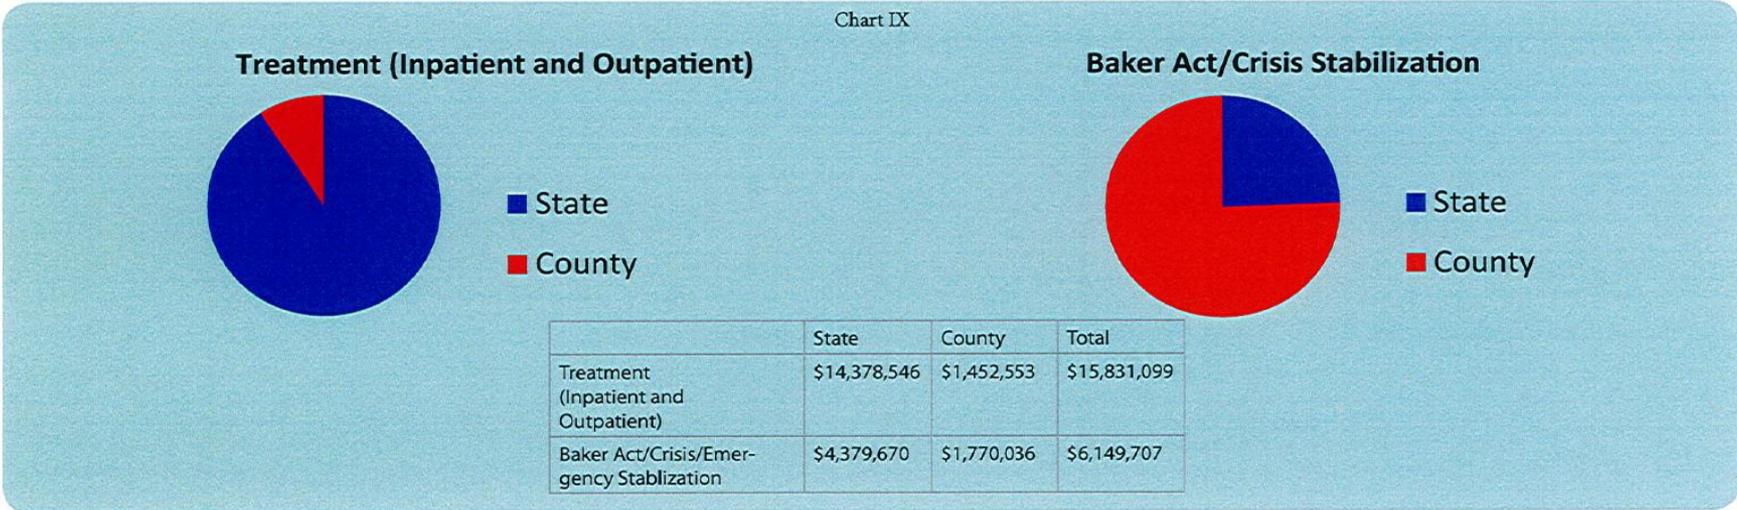

Funding of Mental Health Services

The charts below indicate the level of funding by Palm Beach County and the District IX Substance Abuse and Mental Health Office of the State of Florida. Included in the category “Treatment” are services including: inpatient treatment, outpatient treatment, psychiatric and medical services and individual and group counseling for children, adolescents and adults.

The category “Baker Act/Crisis Stabilization” includes services for those in crisis (danger to self and others) and the immediate services required to address the crisis. The mobile crisis team staff sees a crisis individual in the home, school or community.

Major Disparities

- A review of the data reveals that Palm Beach County’s suicide rate is above the state and national average.
- More resources are committed to treatment of mental health and mental illness than to prevention for youth and adults.
- The issues of returning veterans need special levels of funding for both the them and their families, including children.
- Holistic planning and program implementation needs to be expanded to include all components of the system of care.

KEY INDICATOR

The Key Indicator for Substance Abuse is the number of deaths and injuries reported by Law Enforcement Agencies

GOAL

To reduce deaths and injuries caused by alcohol- and drug-related motor vehicle crashes

Current Status

Substance abuse does not discriminate on age, gender, sex, race and ethnicity. It can easily be considered an equal opportunity “disease.” Those with the disease do not often fit the stereotype of the addict but rather can be working people in the community who are at varying stages of substance abuse dependency. Due to the social acceptance of alcohol and the part it plays in American life, many are in a state of denial of the effects physically, emotionally and socially of the drug. Risky behavior is characteristic of those under the influence of alcohol. Drinking and driving is one of the risky behaviors that has received much attention due to changing attitudes, increase law enforcement attention and the efforts of community groups.

Contributing issues to substance abuse include:

- Trauma and post-traumatic stress disorder
- Mental health/illness
- Domestic violence and a history of child and family abuse
- Poverty and homelessness

“Traffic death is a lead indicator of the prevalence of substance abuse problems.”

— Anonymous

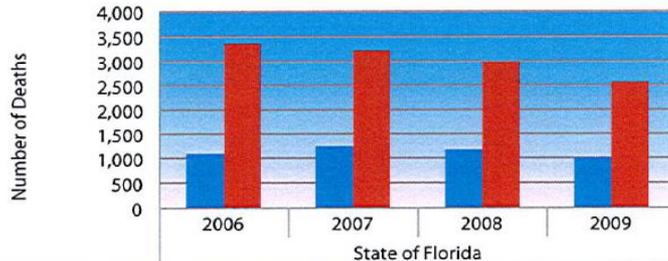

The Facts

- Fatalities as a result of traffic crashes on Florida roadways decreased between 2008 and 2009 by 23.8%. This is the fourth consecutive year traffic fatalities have decreased from the previous year.
- Alcohol-related fatalities decreased between 2008 and 2009 by 21.5% in the State of Florida.
- Of drinking drivers in crashes, 21-year-old drivers had the highest involvement rate in all crashes (30.8) and in fatal crashes (1.57).
- Fatalities of teen drivers and passengers decreased statewide from 2008 and 2009 by 4% from 502 to 482 respectively.
- Based on 2009 traffic death data, Palm Beach County is below the State of Florida traffic death rate.
- The 2008 Florida Youth Substance Abuse Survey reports that with overall prevalence rates of 54.2% for lifetime use and 31.3% for past-30-day use, alcohol is the most commonly used drug among Palm beach County students.
- Disapproval of alcohol use seems to have weakened over time. The percentage of students reporting that it would be “wrong” or “very wrong” for someone their age to drink alcohol regularly decreased from 67.9% in 2000 to 63.9% in 2008.
- In Palm Beach County, 15% of surveyed students reported “binge” drinking, with corresponding rates of 6.6% among middle school students and 21% among high school students. This represents similar rates of both middle and high school binge drinking compared to the state as a whole (6.9% for middle school and 19.6% for high school).

Listed below are Palm Beach County traffic death statistics captured by law enforcement and reported in yearly increments on a standard long form. **Source:** "A Safer Florida: Highway Safety and Motor Vehicles." Traffic Crash Statistics 2009, www.flhsmv.gov

Alcohol-related fatalities	62	73	79	62
Fatalities	212	206	198	151

Current and Future Planning Efforts

Substance abuse prevention and treatment is an issue for schools, the community and law enforcement. The Palm Beach County Substance Abuse Coalition and the Underage Drinking Task Force have developed a strategic plan to address the multiple dimensions of the issue among youth and the community.

A youth drug court has been developed to intervene and defer youth from the criminal justice system, the SAMH has funded 16 school-based substance abuse counselors, and treatment agency staff has been trained in co-occurring disorders.

Palm Beach County developed and implemented an adult drug court more than seven years ago. Since that time, drug courts have been established that address the specific needs of youth (Youth Drug Court) and families (Family Drug Court) as well as drug courts addressing the needs of those with co-occurring disorders and those in the child welfare system. The Palm Beach County Sheriff successful drug farm was closed in 2010 due to lack of funding.

Palm Beach County, Circuit 15 SAMH received an access to recovery grant in 2010. This grant will provide service to returning OEF and OIF vets (30%), criminal justice clients (30%), clients with co-occurring disorders (20%), prescription drug users (15%) and persons experiencing homelessness (5%).

A new internet portal has been developed and will begin implementation during late 2010.

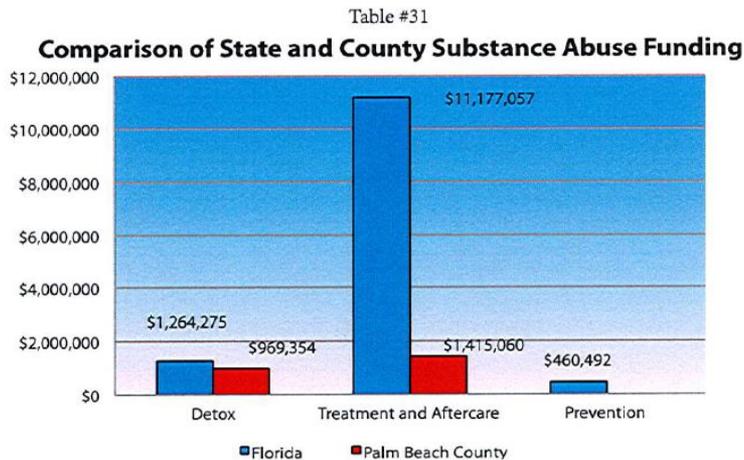

Several community groups, such as MADD and the Dori Slosburg Foundation, the Palm Beach County Substance Abuse Coalition, the Palm Beach County Schools conduct community awareness and education programs for youth and adults on the multiple issues related to substance abuse.

Substance Abuse

Funding For Substance Abuse Services

Substance abuse services in Palm Beach County are provided by the county, the State of Florida, private insurance, fund raising and self-pay with the major funding sources being the county and state.

The chart below indicates the funding from the county and state.

Major Disparities

It appears from the data that Palm Beach County has a lower incidence rate than the State of Florida for alcohol-related fatalities and injuries. The trend data for both entities shows a continuing trend toward decreasing incidences on both variables. Of concern is the lack of county data for fatalities and injuries for adolescents in light of the incidences of alcohol consumption and binge drinking among county adolescents (31.3% and 15.1% respectively) which is higher than the statewide average (29.8% and 14.8% respectively).

A review of funding for services indicates that the county does not allocate specific funds for substance abuse prevention for children or adults whereas the state allocates funds for both populations.

According to the Mental Health Substance Abuse Commission Report of the States, Florida only meets 19% of the need for treatment. By inference, since the state is the largest funder of substance abuse treatment in the county, the need in the county is also not being met.

Mental Health

Mental Health-A state of well-being in which every individual realizes his or her own potential, can cope with the normal stresses of life, can work productively and fruitfully and is able to make a contribution to her or his community. (Source: World Health Organization; http://www.who.int/mental_health/en/)

A **psychological state of well-being**, characterized by continuing personal growth, a sense of purpose in life, self-acceptance, and positive relations with others. Some people define mental health as the absence of mental illness, but many psychologists consider this definition too narrow. (Source: Encarta; Dictionary; http://encarta.msn.com/encyclopedia_761573719/Mental_Health.html)

School Readiness

School Readiness-a child that is a socially, emotionally, cognitively and physically eager and ready to learn upon kindergarten entry.

Skills include:

- Interact with others positively
- Pay attention
- Remember lessons taught
- Follow a teacher's directions
- Finish tasks
- Practice independently what they have learned
- Learn to control their emotions
- Learn to be persistent even when learning seems tough

Environment Rating Scales – an internationally renowned program assessment tool that is researched based, valid and reliable. The Scales were authored by Thelma Harms and Debby Cryer. The Early Childhood Environment Rating Scale, Revised Edition (ECERS-R) provides an overall picture of the surroundings that have been created for the children and adults who share an early childhood setting. The ECERS consists of 43 items that assess the quality of the early

childhood environment including use of space, materials and experiences to enhance children's development, daily schedule, and supervision. This 43 item scale covers seven categories:

- Personal Care Routines
- Space and Furnishings
- Language-Reasoning
- Activities,
- Interactions
- Program Structure
- Parents and Staff

Each item is ranked from 1 to 7. A ranking of 1 describes inadequate conditions while a ranking of 7 describes excellent conditions.

Since the ECERS covers the basic aspects of all early childhood facilities, it can be used in a number of ways by child care facilities, Head Start programs, parent cooperative preschools, private preschool programs, playgroups, church-related preschools, and kindergarten programs. For instance, if used as a self-study/self-improvement guide, inadequate or minimal scores on the ECERS scale indicate areas for emphasis in training and learning. The ECERS can also be used as a pre- and post-test measure to assess the impact of training and continuing education.

School Readiness Providers – providers receiving subsidized funds to deliver the school readiness program. School readiness providers must offer programs that include:

- Research-based early learning activities and instruction
- Developmentally appropriate curriculum
- Literacy programs
- Character development programs
- Healthy and safe environments
- Appropriate staff-to-child ratios
- Personnel with required qualifications
- Family-friendly environment that support parent involvement opportunities

Comprehensive Needs
Assessment and Plan**

Palm Beach County Behavioral Health Comprehensive Needs Assessment and Plan

- Purpose: to plan for a comprehensive, coordinated, integrated, system of care that is seamless and satisfying to its stakeholders.
- Goal: to align resources and reduce duplication of efforts and services

Palm Beach County Behavioral Health Comprehensive Needs Assessment and Plan

- What is our process?
 - Key Stakeholder Interviews
 - 51 so far, 11 scheduled
 - Focus Groups
 - 7 so far, 3 scheduled
 - Survey
 - Reviews of existing plans and reports
 - Review and analysis of data
- Data synthesis
- Resource Inventory and Map
- Funding Map/Vulnerable Populations
- Data Visualization and Prioritization: **February 10** at Hanley
- Development of Plan
- Launch of Plan
- Collaboration with Funders for Synergy

Palm Beach County Behavioral Health Comprehensive Needs Assessment and Plan

What do we know? Adult Mental Health

- The state of Florida ranks lowest in the country for prevalence of Adult Mental Illness (adults with any mental illness), with a rate of 16.03%
- Expected numbers of adults (over the age of 18) with any mental illness in Florida: 2,463,000
 - **Extrapolated to Palm Beach County: 174,000**
- Florida ranks 49th in access to mental health treatment for adults, with a rate of 62.3% adults not receiving mental health treatment
- For those adults who recognized they may have a mental health problem and faced a barrier to receiving treatment, Florida ranks 12th in the nation, with a rate of 19%.
- The rate of uninsured adults with mental illness in the state of Florida was 23.6%, ranked 45th in the nation
- Numbers of adults who received Adult Mental Health services by SEFBHN Provider Network in 2015-2016: **20,394**

Data Sources: SEFBHN and The State of Mental Health in America, 2017 (Mental Health America)

Palm Beach County Behavioral Health Comprehensive Needs Assessment and Plan

What do we know? Children's Mental Health

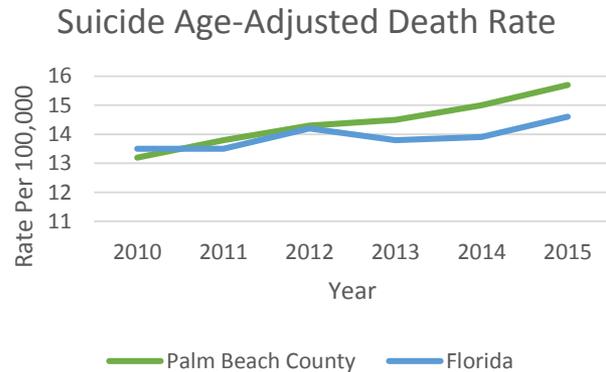

- The state of Florida ranks 21st in the country for prevalence of Youth (age 12-17) with at least one major depressive episode in the past year, with a rate of 10.50%
- Expected numbers of youth with at least one major depressive episode in the past year in Florida: 146,000
 - **Extrapolated to Palm Beach County: 18,900**
- Florida ranks 38th in access to mental health treatment for youth with major depressive episode, with a rate of 68.8% of youth not receiving mental health treatment
- The rate of youth with severe major depressive episode who received some consistent treatment in the state of Florida was 15.9%, ranking 45th in the nation
- The rate of Florida children with private insurance that did not cover mental or emotional problems was 9.5%, ranking 35th in the nation
- Numbers of youth who received Children's Mental Health services by SEFBHN Provider Network in 2015-2016: **6,250**

Data Sources: SEFBHN and The State of Mental Health in America, 2017 (Mental Health America)

Palm Beach County Behavioral Health Comprehensive Needs Assessment and Plan

- What do we know?
 - Suicide rates: Palm Beach County ranks in the 4th quartile (least favorable) compared to the rest of the counties in Florida for non-fatal unintentional injury hospitalizations for youth ages 5-18

Inpatient Hospital Utilization by Mental Disorders Principal Diagnosis Grouping, Palm Beach County, 2015

Emergency Department Utilization by Mental Disorders Principal Diagnosis Grouping, Palm Beach County, 2015

Source: Agency for Health Care Administration (AHCA), 2015
Compiled by: Health Council of Southeast Florida, 2016

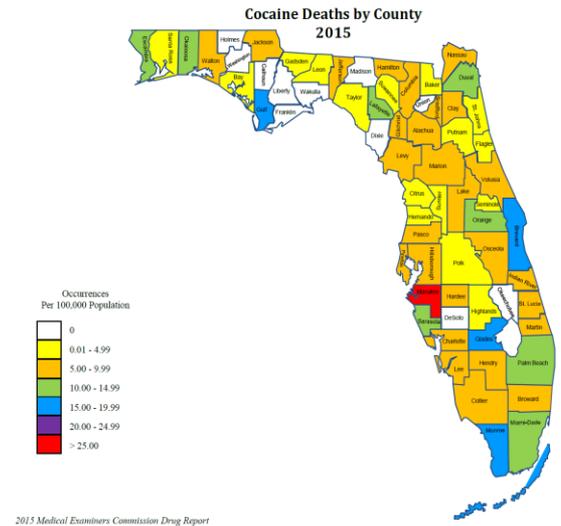

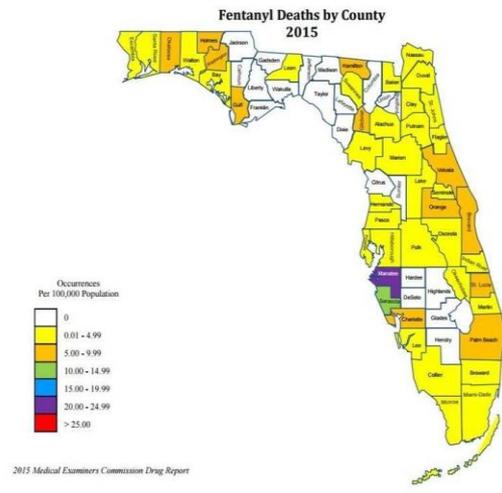

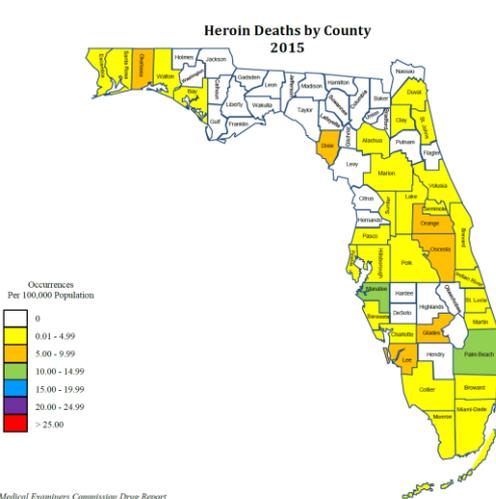

Data Note: Mental Disorders Principal Diagnosis Grouping includes ICD9 Code ranges 290-319. When utilizing this data, it is important to know the following: There are coding differences between hospitals. Some hospitals code more completely and accurately than other hospitals. It is sometimes difficult to classify disease accurately. The codes contained in the patient record may not be specific enough to adequately characterize a patient's condition.

Palm Beach County Behavioral Health Comprehensive Needs Assessment and Plan

- According to the Florida Medical Examiner's Office, in 2015, Palm Beach County had:
 - a higher rate of deaths related to heroin than Broward, Miami-Dade, and Hillsborough Counties;
 - a higher rate of deaths related to fentanyl than Broward, Miami-Dade, and Hillsborough Counties; and
 - a higher rate of deaths related to cocaine than Broward or Hillsborough Counties
