myGeoNav hits the Internet!

For those who haven't heard, **myGeoNav** is now available over the internet.   Many of you may already be familiar with the Property Appraiser's PAPA (Property Appraiser Public Access) System. PAPA's map tool was used as a springboard for developing **myGeoNav**, an application that will benefit many industries and the general public. While PAPA is a wonderful tool for viewing property and home values, **myGeoNav** is an Internet tool for viewing GIS (Geographic Information Systems) data layers from many different county agencies.

myGeoNav will give you access to view property lines, current and historical aerial photography, political boundaries, parks, schools and school boundaries, coastal and environmental features, County land use and zoning information, Palm Tran bus stops and routes and much, much more.   You can also create mailing lists and view sales information for your neighborhood.

One of the best things about **myGeoNav** is *your* ability to customize it to your personal preferences. You will be able to have it open up every time in your preferred map area with the data layers you would like to see such as, road names, aerials, parcel boundaries, municipalities, etc. You can also have **myGeoNav** automatically open PAPA, Google Maps™, or Microsoft Bing's Birdseye View for seeing the sides of a building from all directions. These secondary applications can come up upon entering the site, or can be turned on individually as needed.

Please visit the site at http://maps.co.palm-beach.fl.us/cwgis/mygeonav.html. Once there, you may bookmark this site for easy reference in the future. We hope you find this new tool useful to you and your organization.
