Check a/c

**Task performed:**

1. Check A/C on cab, found no freon in system, charged with nitrogen, found condenser leaking and a crack in compressor and it was locked up so I removed the compressor dryer expansion valve and condenser then I flush all hose and evaporator, installed new part vacuum system charger system.
2. Check patient compartment, found system low on Freon and the high side line leaking. Remove compressor, check oil in unit found it was clean low so I put 402 in compressor. Put compressor back on and fixed hose with new fitting vacuum system and charged, worked replaced filter in compartment.
3. Ran cab A/C and pressure was very low and dryer was freezing up. Recover system and replace dryer and expansion valve vacuum system and charged it and it works good.
4. Found radiator hose was flat spring was bad in hose. R&R radiator hose.

AC in cab is not blowing cold. Burning smell coming from engine compartment R45

**Task performed:**

Parts

Quantity

1. Drove from headquarters to ST45 for patient A/C out. Got to ST found patient A/C low on freon, so I charge system pressure were good and A/C was cool. Found a small leak on hose on compressor but it should go through the weekend, driver said the cab A/C was not working so I put gayge on it and found system empty, so I tried to change it but they got a call so they left.
2. Driver on R45 said the truck cab A/C was working on and off so I put gauge on the truck and pressure was good and couldn't see empty problem and they got a call so they took the call and went home.
3. Got home.
