

2009 BIENNIAL UPDATE

FIRE RESCUE IMPACT FEE

Overview:

Fire rescue impact fees are only assessed on residential development. The fire rescue impact fee is calculated by multiplying the capital cost per call by the average number of calls per parcel. The fire rescue impact fee is assessed against residential and non-residential land uses.

Explanation:

The key determinants of the fee are costs of invested capital and calls per parcels. Fire Rescue has provided a breakdown of each.

Capital Investment – \$219,857,886

Call load – 91,606

Cost per call - \$2400.04

Backup data supporting Fire Rescue is available on the web under Support Data.
