

If you have been diagnosed with COVID-19

Have you been diagnosed with COVID-19?

It's important to act quickly once you know you have COVID-19.

Do you require monoclonal antibody therapy?

Monoclonal antibodies target the virus to help your immune system fight off COVID-19.

The treatment is for those with mild-to-moderate COVID-19 **who are at high risk** for developing severe symptoms. It is an intravenous (IV) medication given as a Home Health service or at an outpatient infusion center. Your provider can determine if this is an appropriate therapy for you.

When should I start monoclonal antibody therapy?

Monoclonal antibody therapies are most effective the earlier they are given. Treatment should start within 10 days after symptoms begin.

How can I get monoclonal antibody therapy?

Your health care provider will prescribe monoclonal antibody therapy if it's right for you. This service does not require a prior authorization with Cigna, and we will work with you and your provider to help you get treatment.

Does my health plan cover monoclonal antibody therapies?

You do not have a cost-share for monoclonal antibody therapy when your treatment is **in** the Cigna network.

What are my treatment options?

Home Health Service is available to you when your provider prescribes it. What you can expect is a nurse coming into your home, which may last up to two hours—including pre-work plus the infusion plus a post-infusion observation.

Cigna members may call 1-800-CIGNA24

(1-800-244-6224) — The first prompt is the interactive voice response asking if the call is related to COVID-19. If **“yes.”** you will **press 1.**
