

## **Section 4- G**

### **HAB HIV Performance Measures**

The Bureau of HIV and AIDS has created the following performance measures, which comprise indicators that providers can use in monitoring the quality of care they provide. The measures are based upon input key service providers, including case management and medical providers.

The measures can be used by Ryan White HIV/AIDS Program grantees at either the provider or system level. They can be used in their current format or further modified to meet agency needs. Grantees are encouraged to select measures that are most important to their agencies and the populations they serve. The performance measures are tracked in the database.
